

207972 - How to Calculate Zakah on Cash

the question

I have 10,000 Riyals and one full Hijri year has passed since I acquired it. How much is the Zakah that I must pay for it?

Summary of answer

The way to work out the Zakah on cash is to give 25 Riyals for every thousand. So if you have ten thousand, the Zakah is 250 Riyals. Or you can divide the amount you have by forty, and whatever results from that division is the amount of Zakah that must be paid.

Detailed answer

Praise be to Allah.

What must be given as [Zakah](#) on cash is [one quarter of one tenth \(2.5%\)](#) , or 25 out of every thousand.

The way to work out the Zakah on cash is to give 25 Riyals for every thousand. So if you have ten thousand, the Zakah is 250 Riyals.

You can divide the amount (that [has reached the Nisab](#) , i.e., the minimum threshold at which Zakah becomes due) by forty, and whatever results from that division is the amount of Zakah that must be paid.

Based on that, if you divide 10,000 Riyals by 40, the result will be 250 Riyals. This is the amount of Zakah for that [amount \[of cash\]](#) .
